> NASHVILLE is an exciting new addition to our Angus lineup and a phenotypic standout selected from the 2026 GAR Early Bird Bull Sale.
> One of the most impressive Stapleton sons to sell. NASHVILLE had individual ratios of 133 IMF, 116 REA and gained 3.91 per day.
> He is a 6.1 frame bull with added muscle shape, length of body, capacity and excellent foot quality.
> One of our best for Marbling, Ribeye, and $C. Pounds pay the bills, but remember that Marbling is the differentiator.
> His young donor dam, a 7AN624 DUAL THREAT daughter, posts an ultrasound production record of 6 at 108 IMF and 6 at 108 for REA, and a birth weight ratio of 91.

> GRAND SLAM is the hottest bull in the breed and year to date is number one for sales at Select Sires!
> Few sires offer his combination of $M and $C, but it's not just his indexes that he excels for, he is also a breed leader for DOC, RADG, HS, CW, MARB and REA!
> His dam is the $200,000 sale-topping Sunbeam daughter that excels for udder as well as overall quality and balance. GRAND SLAM carries on his dam's maternal quality ranking in the top 1% for HP and CEM as well as top 2% for $M.
> Physically, GRAND SLAM is very attractive with added depth of body and correctness. His foot shape and quality outshine his genetic predictions.

GALAXY's dam

> GALAXY offers excellent phenotype, exceptional EPDs across the board, and an outcross pedigree.
> His greatest strength is the cow power behind him. He weaned off his two-year-old dam at 68% of her body weight. She is also a maternal sister to the Select Sires roster member 7AN813 BEDROCK. The Sitz Shauna cow family is potent for calving ease, growth, udder quality, docility and fertility.
> GALAXY is easy to use for many matings. We expect calving ease, coupled with growth and sound skeletal structure.
> His pedigree is stacked with maternal legends that have repeatedly made fertile and functional daughters that fit any environment.

> At $107,500, SOUTHERN ROCK was the record-breaking, top-selling bull of the Fall 2025 Yon Sale.
> This big-outlined bull is captivating from every angle, combining body length, rib shape and depth with a sound structure, level hip, smooth shoulder, free-moving stride and exceptional foot quality.
> His EPD profile begins with an impressive spread from low BW to elite YW, complemented by high-ranking management traits and elite predictions for CW, MARB, RE and negative Fat. He continues to raise the bar across the entire suite of $Value indexes.
> His sire has been a stronghold in our lineup and consistently sires quality cattle that fit most environments. His dam is an exceptional donor that is making her mark in the Yon program. Study the pedigree, this bull was built from maternal power.

Looking Beyond Fertility EPDs:
The Traits That Build Reproductive Success

by Jamie T. Courter, Ph.D. – State Beef Genetics Extension Specialist, University of Missouri

Every producer has had one. She's the cow that breeds early every year, calves unassisted, weans a heavy calf, and is still in the herd long after many of her contemporaries have been culled. She never seems to require extra attention, yet year after year she quietly contributes to the profitability of the operation.

Unfortunately, we've all had the opposite, too. The cow that comes up open, requires assistance at calving, struggles to maintain body condition, or simply doesn't stay in production long enough to repay her development costs.

This raises an obvious question: can genetics create more cows like the first female described?

Today, beef producers have access to powerful genetic tools that predict reproductive performance, including Heifer Pregnancy (HP), Stayability (STAY), Sustained Cow Fertility (SCF), and other breed-specific maternal evaluations. These EPDs have become invaluable for identifying bulls capable of siring productive replacement females and should serve as the foundation of any maternal selection program.

However, fertility is one of the most complex traits in beef cattle. Unlike traits such as Weaning Weight or Marbling, reproductive performance is influenced just as much, if not more, by the environment as it is by genetics. Nutrition, body condition, health, weather, forage availability, and management all affect whether a cow becomes pregnant. Because so much of the variation is due to non-genetic factors, fertility is considered a lowly heritable trait. That doesn't mean genetics cannot improve fertility, it simply means producers should select for the traits that support reproductive success throughout a female's lifetime.

Fortunately, modern genetic evaluations don't rely on a single measure of fertility. Instead, they provide multiple pieces of information that, when used together, give producers a more complete picture of a bull's ability to sire productive, long-lived daughters. Fertility EPDs measure the reproductive outcome, while complementary indicator traits describe many of the biological characteristics that contribute to that outcome. Considering both allows producers to make more informed breeding decisions.

For example, Mature Cow Weight (MCW) influences a female's nutritional requirements throughout her lifetime. Replacement heifers must reach approximately 55 to 65 percent of their expected mature body weight before puberty, and larger cows require more nutrients to maintain body condition after calving. Matching mature cow size to the feed resources available within an operation can improve a female's ability to consistently breed back under commercial conditions.

Likewise, Calving Ease Direct (CED) supports fertility by reducing dyst ocia, particularly in first-calf heifers. Females that calve unassisted generally recover more quickly after calving and are better positioned to conceive early in the next breeding season, helping maintain a desirable calving interval.

Since fertility is controlled more by the environment than genetics, then environmental adaptation becomes another important piece of the puzzle. Hair Shedding (HS) has emerged as a useful indicator of heat tolerance because cattle that shed their winter hair coat earlier generally regulate

body temperature more effectively during periods of heat stress. Likewise, docile (DOC) cattle typically experience less stress during routine handling. Neither hair shedding nor docility measures fertility directly, but both influence the environment in which reproduction occurs and can support more consistent reproductive performance.

This concept becomes especially important when considering genotype-by-environment interaction (G×E). The highest-performing genetics in one production system may not be the most profitable in another. Instead, the goal is to select bulls whose daughters are genetically suited to the forage resources, climate, management, and production goals of the operation.

Ultimately, no single EPD tells the entire story. Fertility EPDs such as Heifer Pregnancy (HP), Stayability (STAY), Sustained Cow Fertility (SCF), Functional Longevity (FL), and other breed-specific evaluations provide producers with the best available predictions of reproductive performance. Complementary traits, including MCW, CED, HS and DOC, add another layer of information by describing the biological attributes that help females consistently express that genetic potential.

The most fertile cow isn't simply the one with the highest genetic potential. She's the one whose genetics are best matched to the environment in which she is expected to perform. By combining direct fertility evaluations with complementary maternal traits, producers can make more confident sire selection decisions and build cow herds that remain productive, profitable, and resilient for years to come.

Genetic Tools for Building Fertile Females

If your goal is to...	Consider selecting for...	Breeds with EPD for the trait:
Select replacement females with greater reproductive potential	HP, STAY, SCF, or other breed specific fertility/longevity evaluations	HP (Angus, Gelbvieh, Simmental), STAY (Gelbvieh, Limousin, Red Angus, Simmental), SCF (Hereford), FL (Angus)
Develop efficient replacement females	Moderate Mature Weight (MW), Mature Cow Weight (MCW)	Angus, Brangus, Gelbvieh, Hereford, Red Angus, Simmental
Reduce calving difficulty	Calving Ease Direct (CED)	Angus, Gelbvieh, Hereford, Limousin, Red Angus, Simmental
Improve adaptation to heat stress	Hair Shedding EPD (HS)	Angus (EPD); Other breeds can use phenotypic selection
Improve cattle disposition	Docility (DOC)	Angus, Brangus, Gelbvieh, Hereford, Limousin, Simmental
Increase productive herd life	STAY, SCF, or other longevity traits	STAY (Gelbvieh, Limousin, Red Angus, Simmental), SCF (Hereford), FL (Angus)
Select for overall maternal profitability	Maternal selection indexes	$M (Angus), BMI$ (Hereford), API (Simmental), HB (Red Angus), TM (Gelbvieh), $MPI (Limousin) and other maternal-focused indexes

HEAT DETECTION & TAI

For best results perform AI 12 ± 2 hr after detection of estrus.
Use of estrus detection aids (**EDA**) is highly recommended.

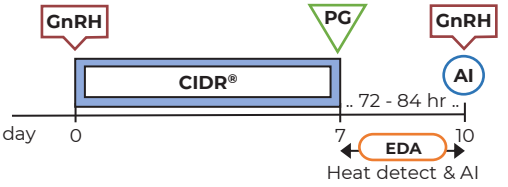

Select Synch & TAI

Heat detect & AI days 6 to 10 and TAI with GnRH all non-responders 72 - 84 hr after PG.

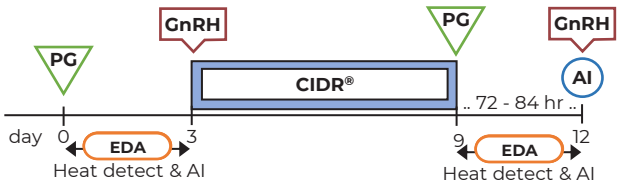

Select Synch+CIDR® & TAI

Heat detect & AI days 7 to 10 and TAI with GnRH all non-responders 72 - 84 hr after PG.

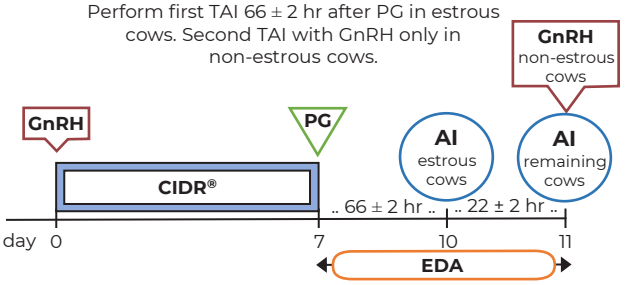

PG 6-day CIDR® & TAI

Heat detect & AI days 0 to 3. Insert CIDR + GnRH to non-responders, heat detect & AI days 9 to 12. TAI with GnRH non-responders 72 - 84 hr after PG and CIDR removal.
Protocol may be used in heifers.

7-day CO-Synch+CIDR® & Split-TAI

Perform first TAI 66 ± 2 hr after PG in estrous cows. Second TAI with GnRH only in non-estrous cows.

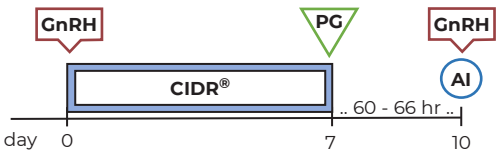

FIXED-TIME AI

Time for Fixed-time AI (**TAI**) should be considered as the approximate average time of insemination based on the number of females to inseminate, labor, and facilities.

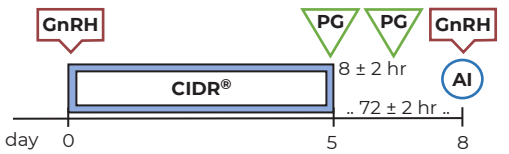

7-day CO-Synch+CIDR®

Perform TAI with GnRH at 60 to 66 hr after PG.

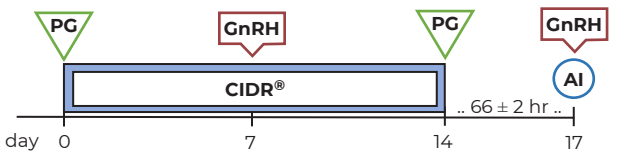

5-day CO-Synch+CIDR®

Perform TAI with GnRH at 72 ± 2 hr after CIDR removal.
Two injections of PG 8 ± 2 hr apart are required for this protocol.

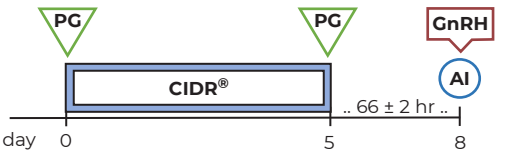

7&7 Synch

Perform TAI with GnRH at 66 ± 2 hr after CIDR removal.

Bos indicus PG 5-day+CIDR®

Perform TAI with GnRH at 66 ± 2 hr after CIDR removal.

> MANTACHIE is proving to be the sire we expected. With a limited number in his first crop, he has already shown he can create cattle that offer the extra look and presence that is needed to be competitive on the tanbark!
> He is ultra-attractive with added hip and foot size and has the blaze face for extra measure. With *gender* SELECTED™ female semen available you can take the guess work out of your mating and create your next champion today!
> His maternal line is legendary, his sire is record setting and his type and kind are elite.

> GENERATIONAL was the highly sought after $120,000 high-seller from Ruby Cattle Company's spring production sale!
> He offers breed-leading EPDs and stands alone as the only SimAngus™ sire that is double digit CE with over 125 WW and 185 YW. GENERATIONAL also offers breed-leading ADG, MWW, DOC and CW.
> His dam is no stranger to the spotlight as an anchor of the Ruby program. She has produced other herd sires including Ruby's Quadrant and Ruby's Outer Limits.
> He is extremely docile and offers muscle and body density that is unmatched. He is sound with great foot shape as well.

> ALPHA is no longer one of the best kept secrets in our lineup! Breeders are finding that the proof is in the progeny. He offers growth and performance in a complete, correct and balanced package.
> ALPHA is moving into the proven category and he continues to improve, ranking in the top 2% for WW, 3% for YW, 4% for CW and 10% for MARB. This places him in the top 15% for API and 3% for TI.
> He is a three-quarter SM that offers mating flexibility to make purebred or percentage cattle.

> HIGH STANDARD is just that, a bull setting a new standard for Hereford genetics.
> He has 10 traits and indexes that rank in the top 1% of the breed, offering elite predictions for both maternal and terminal traits.
> This deep crimson-red sire offers extra pigment in a high-phenotype package, combining a long, level hip, ideal balance, and excellent feet and legs.
> His dam is a modern, dense-made daughter of Daybreak with excellent foot quality.

GOLD RUSH daughter,
Candy Meadow Farms, TN (photo reversed)

> The proven gold standard, GOLD RUSH ranked as the No. 1 bull for registrations in 2025.
> One of our top-selling bulls for good reason, GOLD RUSH delivers across the board and excels in nearly every trait customers value.
> He offers proven calving ease, maternal value, and elite carcass merit in one complete package.
> He continues to rank near the top of the breed for Marbling, Carcass Weight, udder traits and all three indexes: CHB$, BMI$ and BII$.
> GOLD RUSH is moderately framed with ample muscle, depth of rib, attractive color pattern, eye pigmentation and an excellent disposition.
> His daughters are easy fleshing with excellent udder balance and teat length, reflected in his breed-leading UDDR, TEAT, and BMI$ EPDs.

> One of the most exciting Hereford bull to enter our lineup in recent years!
> It does not matter your breed of preference, EXCLUSIVE is extremely impressive. He is wide based, with extra width of chest and depth of body. His added top shape and overall muscle mass are a unique complement to his top 3% ranking for MARB.
> While you love this bull for his phenotype he also offers some impressive EPDs ranking in the top 10% for WW and BII and in the top 5% or better for TEAT, MARB and $CHB.
> Heterozygous polled and offers extra mating flexibility when making both polled and horned genetics!

> HISTORIC is quickly writing his own story at Select Sires.
> His progeny are exciting prospects loaded with phenotypic quality.
> He has sired many high-selling sons through the spring sales season.
> Look at his number set, he lights it up with eight traits in the top 15% of the breed.

> ALL AMERICAN is the second most popular bull in the breed for registrations.
> With over 1,000 calves reported on his performance pedigree, his progeny report an average 104 Marbling ratio.
> He checks all the boxes - homo. black, homo. polled and powerful. ALL AMERICAN's soundness, depth and body mass make him a must-use sire.
> His balanced and fault-free EPD profile excels for performance and marbling resulting in a top 25% ranking for all three breed indexes.
> He is an ideal sire to make both purebred and percentage offspring.
